

R7 historical syllabus fixture. Course 6.045J, Automata, Computability, and Complexity, was taught in Spring 2011. It belongs to Electrical Engineering and Computer Science and Mathematics and is undergraduate level. The instructor was Scott Aaronson. The meeting pattern was two ninety-minute lectures and one one-hour recitation each week. This concise evaluation adaptation was checked against the cited MIT OpenCourseWare syllabus on 2026-09-08 and is not a current MIT catalog statement.

Prerequisite and topic facts. Course 6.045J assumed prior completion of 6.042, Mathematics for Computer Science, or equivalent mathematical preparation. The course covered automata, computability, complexity, cryptography, learning theory, interactive proofs, and quantum computing. In this fixture, the historical 6.042 reference is normalized to course entity 6.042J while preserving the source wording. Adapted from MIT OpenCourseWare under CC BY-NC-SA 4.0; changes were made for a noncommercial retrieval fixture, and no MIT endorsement is implied.
